

# GoMobile

**Duration:** 18 months

## **Description of the project**

When looking at how familiar young people are with mobile touchscreen devices and how much time they spend on them the question needs to be asked if this development can't be integrated into the learning process. The consortium believes that a sustainable increase in knowledge and skills can only be accomplished if the learners are motivated. In order to achieve this the consortium wants to create a book that helps teachers use new mobile learning approaches in class.

The book is seen as a way of complementing the skills of teachers that helps them learn about new teaching methods and apply them in class. The project supports the integration of mobile learning into regular school classes and provides materials to increase the digital competences of teachers. This will be done by giving teachers an easy, hands-on introduction.

## **Specific objectives:**

-To get an overview on mobile learning in vocational schools and in companies and meet the needs of teachers and trainers in this field.

-To create a book that introduces teachers to the concept of mobile learning and gives them a deeper understanding.

## **Participating organisations:**

- Ingenious Knowledge GmbH (coordinator, Germany)
- ANCED (Spain)
- Private Institute Emphasys Centre (Cyprus)
- European Learning Network Ltd (United Kingdom)
- Universitaet Paderborn (Germany)
